

Skill Week -2

1. To Create Main Loop, Display Prompt, Read User Input, Handle Exit Conditions, Design Control Flow Diagram, Test Interactive Loop

```
#include <stdio.h>

#include <string.h>

#include <stdlib.h>

int main()
{
    char input[100];
    while (1)
    {
        // Display prompt
        printf("myshell> ");
        fflush(stdout);

        // Read user input
        if (fgets(input, sizeof(input), stdin) == NULL)
        {
            printf("\nExiting...\n");
            break;
        }

        // Remove newline character
        input[strcspn(input, "\n")] = '\0';

        // Handle exit condition
        if (strcmp(input, "exit") == 0
```

```

{
    printf("Exiting shell...\n");
    break;
}
// Handle empty input
if (strlen(input) == 0)
{
    continue;
}
// Execute the command
system(input);
}
return 0;
}

```

```

ashwithreddy_earla@ASHWITHREDDYPC:~$ ./skill
